

The Innovative Switch Company

Cole's quality Open Frame Instrument Rotary Switch provides low contact resistance ($.005\Omega$), very high contact reliability, smooth action with positive positioning, precision design, and trouble free construction of glass epoxy insulators and silver conductors.

Rated for 100,000 cycles minimum, the contact mechanism is a bifurcated brush, promising 100% redundancy and avoidance of contact failure. In addition, it has been designed and manufactured to meet or exceed all applicable requirements of MIL-DTL-3786, MIL-T-945, QQ-P416, MIL-S-13282, MIL-STD-202, MIL-A-8625, and MIL-STD-167. All Open Frame Series switches are available pre-wired to terminal boards or connectors.

Cole's Open Frame switches are ideal for high voltage, high current, and low resistance applications.

OPEN FRAME SERIES

Open Frame Instrument Switches

Very Low Electrical Resistance, Very Stable Electrical Contacts, 64 Positions Max

Features

- * Solid Silver and Silver Plated Conductors.
- * Very Low Resistance (.005Ω).
- * High Current Capacity.
- * User Adjustable Stop.
- * Pre-Wired Option for Ease of Installation.
- * Glass Epoxy as Strong Stable Insulator.
- * Bifurcated Brush Contacts for high reliability.
- * 13+ Decks as Special Order.
- * Up to 12 Decks as Standard.
- * 8 Poles Maximum Available.
- * 64 Positions Maximum Available.

ORDERING INFORMATION

Sample Code

Switch shown in the sample code is a 2-1/4 Square, 2 Poles per Deck, Shorting, 11-1/4 Detent, 31 positions per Pole, 3 Decks, Adjustable Stop, Terminals to Rear.

OPTIONS

The following options can be added to the standard switch. When ordering, simply add the letters after the basic part number.

- A = Adjustable stops.
- F = Fixed stop between the first and last position when maximum switch positions are selected.
- L = Low Level.
- R = Terminals to rear.

While ordering information is provided, we encourage you to contact Cole for assistance creating a part number.

NOTES:

Series Size:

14=1-1/2" Square.

22=2-1/4" Square.

16=1-3/4" Square.

26=2-3/4" Square.

NS=Non-Shorting.

S=Shorting.

- Position listed are maximum available, full rotation, within configuration parameters.
- Non-Shorting contacts will be furnished unless otherwise specified.

- Refer to series configuration specifications for complete details and proper identification.
- Larger deck sizes, detent spacing variation available for special applications.

26SP-140	40	9	9	26SP-240
26SP-145	45	8	8	26SP-245

*Where it is required to have no open circulating between positions, including the independent contact when the switch is rotated, use these SHORTING Basic I.D. numbers.

FUNCTION: The typical schematic left, is 24 positions, 15 degrees, 23 of the positions are shorted together by 23 finger brushes connected in common to one collector ring. The 24th position is contacted by an entirely separate finger brush which is connected to a separate collector ring. As the switch is rotated, the separate brush makes contact with each switch position while simultaneously all other positions are shorted together. No second one pole deck is required to perform this function, thus overall length is reduced and wiring time costs are reduced.

ONE PIECE FINGER BRUSHES: No mechanically or solder joined sections in the solid, stress-free one piece finger brush assembly. Solid fine silver finger brush contacts, stator contacts and collector rings.

BINARY CODING OR POSITION SELECTION: Paralleling decks singly or in tandem are used for binary coding or position selection allowing minimum amount of interconnecting circuit and remote control.

APPLICATION EXAMPLES:

- 1) Low voltage signal testing.
- 2) Multiple circuit cable testing, both continuity and voltage breakdown.
- 3) Current testing circuits to ground or common.
- 4) Solid state testing where it is desirable to connect all circuits to eliminate transients causing erroneous test data.
- 5) One or more paralleling decks can be included in a standard multi-deck switch to meet all types of requirements.

PROGRESSIVELY PARALLELING (SHORTING) SWITCH

PROGRESSIVELY
PARALLELING

PROGRESSIVELY PARALLELING (SHORTING) SWITCH		
Shorting Basic I.D.	Detent(°) Spacing	Positions Maximum With Stop
26PP-211	11 1/4	16
26PP-212	12	15
26PP-215	15	12
26PP-220	20	9
26PP-222	22 1/2	8
26PP-230	30	6
26PP-240	40	4
26PP-245	45	4

MAXIMUM ROTATION: 180 Degrees.

FUNCTION: The one piece finger brush assembly progressively connects (or shorts) together the switch positions sequentially as the switch is rotated.

ONE PIECE FINGER BRUSHES: No mechanically or solder joined section in the solid, stress-free one piece finger brush assembly. Solid fine silver finger brush contacts, stator contacts and collector rings.

APPLICATION EXAMPLES: This type of switch is utilized for paralleling capacitors in capacitance decade units, for varying capacity values in multiple fixed frequency generators, receivers, transmitters, etc. It is used in many resistance bridge, strain gage and transducer applications, synchro systems, remote controlling, and computer systems. One or more progressively paralleling decks can be included in a standard multi-deck switch to meet all types of requirements, providing it does not rotate over 180 degrees.

NOTES

Current Rating: 1 1/2 amp with standard finger brush. Resistance: 0.005 ohms.
